Claims 15-20 have been renumbered as claims 11-16, respectively.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 11-16 are rejected under 35 U.S.C. 103(a) as being unpatentable over Anguera '191 in view of either Larsen or Anguera '395, and Lewis. Anguera '191 teaches the claimed method with the exception of the claimed cross sectional shape of the boards and the aligned drilling and pin press axis. Both Larsen and Anguera '395 show boards having the claimed cross sectional shape scaffolding boards. Lewis teaches of locating the drilling and pinning axis in an aligned manner. It would have been obvious to one of ordinary skill in the art at the time the invention was made to provide Anguera '191 with boards of the claimed cross sectional shape to enable their use for scaffolding, and to modify his machinery to comprise aligned drilling and pinning axis to increase efficiency of his laminating operation. Furthermore, to alternate the grains of the boards as claimed, would have been an obvious mechanical expedient, as such is a conventional practice to enhance the integrity of the plank. To use the conventional square cross section pin, for its known advantage, would have been an obvious mechanical expedient.

The prior art made of record and not relied upon is considered pertinent to applicant's disclosure. Brown and Varna showing boards with grains having alternating directions.
